## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1. (Currently Amended) A transparent acrylate pressure-sensitive adhesive comprising a polyacrylate and a filler, wherein the acrylate pressure-sensitive adhesive filler comprises a polyacrylate and polyacrylate-coated particles of silicate and/or of silica gel, wherein said particles additionally comprise a coating of polyacrylate chemically bonded to said silicate and/or silica gel, and wherein the polyacrylate-coated particles of silicate and/or of silica gel having have a size of not more than 50 nm.
- 2. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 1, wherein the polyacrylate-coated particles of silicate and/or of silica gel have a size of not more than 10 to 30 nm.
- 3. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 1, wherein the polyacrylate-coated particles of silicate and/or of silicate are present with a weight fraction of 0.5 to 25 relative to unfilled silicate/silicate.
- 4. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 1, wherein the polyacrylate is obtained from a comonomer composition comprising:

a) acrylic acid and methacrylic acid derivatives of the formula (I), with a fraction of 70 to 100 percent by weight,

$$CH_2 = C(R_1)(COOR_2)$$
 (I)

where  $R_1$  = H or  $CH_3$  and  $R_2$  = H or an alkyl chain having 2 to 20 carbon atoms, or stearyl (meth)acrylate or (meth)acrylic acid, and

- b) vinyl compounds comprising functional groups, with a fraction of 0 to 30 percent by weight.
- 5. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 4, wherein the vinyl compound is a maleic anhydride, a styrene, a styrene compound, a vinyl acetate, a (meth)acrylamide, an N-substituted (meth)acrylamide, a β-acryloyloxy-propionic acid, a vinyl acetic acid, a fumaric acid, a crotonic acid, an aconitic acid, a dimethylacrylic acid, a trichloroacrylic acid, an itaconic acid, a hydroxyalkyl (meth)acrylate, an amino-containing (meth)acrylate, a hydroxyl-containing (meth)acrylate, a 2-hydroxybropyl (meth)acrylate, and/or a 4-hydroxybutyl (meth)acrylate.
- 6. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 4, wherein the vinyl compound is a double-bond-functionalized photoinitiator.

7. (Previously Presented) The acrylate pressure-sensitive adhesive of claim 1, wherein the polyacrylate-coated particles of silicate and/or of silica gel have been functionalized with a free-radical initiator.

## 8. (Canceled)

- 9. (Currently Amended) The acrylate pressure-sensitive adhesive of claim 8 1, wherein the polyacrylate of the pressure-sensitive adhesive and of the polyacrylate-coated particle coating are identical.
- 10. (Previously Presented) A process for preparing an acrylate pressuresensitive adhesive of claim 1, said process comprising polymerizing the acrylates and comonomers in the presence of at least one organic solvent or in bulk, the polyacrylatecoated particles of silicate and/or of silica gel being mixed in.
- 11. (Previously Presented) The process of claim 10, wherein polyacrylate-coated particles of silicate and/or of silica gel having a maximum size of 50 nm are mixed in.
- 12. (Previously Presented) The process of claim 10, wherein the polyacrylate-coated particles of silicate and/or of silica gel are mixed in with a weight fraction of 0.5 to 25 relative to unfilled silicate/silica gel.

- 13. (Previously Presented) The process of claim 10, wherein particles of silicate and/or of silica gel are functionalized with a free-radical initiator in an upstream operation.
- 14. (Previously Presented) The process of claim 10, wherein the polyacrylate-coated particles of silicate and/or of silica gel are mixed in during or after the polymerization.
- 15. (Previously Presented) The process of claim 10, wherein the polyacrylate of the acrylate pressure-sensitive adhesive and of the polyacrylate-coated particle coating are identical.
- 16. (Previously Presented) The process of claim 10, which further comprises crosslinking the acrylate pressure-sensitive adhesive by UV irradiation in the range from 200 to 400 nm.
- 17. (Previously Presented) The process of claim 16, wherein the acrylate pressure-sensitive adhesive is crosslinked by ionizing radiation or by thermal crosslinking.
  - 18. (Canceled)
- 19. (Previously Presented) A pressure-sensitive adhesive tape comprising the acrylate pressure-sensitive adhesive of claim 1.

20. (Previously Presented)	A bonding method comprising applying a
pressure-sensitive adhesive tape of claim 19 to a substrate.
